The Truth is in the Detail

The 1.3 megapixel infrared cameras bundled with the VIP Vision standalone range have a maximum recording resolution of 1280 x 1024. When compared to traditional analogue recording resolutions, this is **three times** greater than D1 (704 x 576) and **twelve times** greater than CIF (352 x 288). In short, the resolving power of the NVRPROPACK range allows for greater surveillance area coverage, providing larger images and preserving finer details.
